Product	Digital Solution Builders — portfolio & lead-generation site
Version	1.1
Last updated	2026-08-02 — implementation-status refresh
Status	Live — https://dsbdigital.biz (Vercel project dsb-digital)
Owner	Daniel Solomon Bangura
Brand	Digital Solution Builders (DSB) — personal Digital Product Development brand
Classification	Confidential — Digital Solution Builders
Repository	<code>dsbangs1367-pixel/digital-solution-builders-site</code> (public)

The Digital Solution Builders site is the home of a personal Digital Product Development practice. This document records the live site, what it does, and where it goes next. Content stays focused on Digital Product Development.

2. Executive Summary

What it is. A fast, dark-themed single-page React site that presents the Digital Solution Builders brand, showcases case-study work, publishes insight articles, and captures inbound leads. It includes a lightweight owner-only admin area for engagement analytics; portfolio and article content is managed in code (data registries guarded by parity tests), not through the admin UI.

Why it exists. It is the brand's shopfront and lead engine: a place for prospective B2C clients to understand the offer, see proof of work, and get in touch. It replaced a paid website-builder (Wegic), removing a recurring subscription while giving full control over performance, security and content.

Current status (2026-08-02). Live on Vercel at `dsbdigital.biz` with full security headers, a contact-to-lead flow, and a weekly automated health-check. The portfolio carries 19 project entries (12 live) and 13 case-study pages, plus 9 insight articles, and a career-playbook landing page shipped 2026-07-20 at `/playbook`. The codebase is a Vite + React 19 + TypeScript app with Framer Motion and Recharts; serverless functions on Vercel plus Upstash Redis (KV) back the admin analytics and lead relay (a Supabase client scaffold exists but is unused).

The single ask. Keep the site as the canonical brand surface and approve incremental content/SEO investment (more case studies, articles) on the current zero-recurring-cost hosting.

3. Problem & Context

The problem. A solo Digital Product Development practice needs a credible, fast, controllable web presence that turns visitors into enquiries — without paying a monthly website-builder fee or being locked out of its own performance and security settings.

Why now. Migrating off the Wegic builder (completed 2026-05-01) removed a \$69.99/month cost and unlocked full ownership of the stack: edge hosting on Vercel, hardened HTTP headers, and a custom lead pipeline.

The approach. A hand-built single-page app on modern, free-tier-friendly infrastructure, with a small admin surface so content can evolve without redeploys, and an automated weekly health-check guarding uptime, TLS and headers.

4. Users & Personas

Prospective client (primary). A B2C visitor evaluating whether to hire DSB for digital product work. Wants to quickly grasp the offer, see relevant case studies, and reach out.

Reader. Arrives via an article or insight piece; a top-of-funnel visitor to be nurtured toward enquiry.

Owner / admin (Daniel). Manages projects, publishes articles, and reviews engagement through the admin and insights areas.

5. Scope

In scope (v1.0, shipped)	Out of scope (v1.0)	Later
Marketing single-page site (hero, value prop, CTA)	E-commerce / checkout	Expanded case-study library
Case studies + insight articles	Client login portal	SEO content programme
Contact-to-lead capture	Multi-author CMS	A/B-tested landing variants
Admin area (projects, content)	Paid memberships	Richer analytics dashboards
Insights/analytics view	—	—

6. Functional Requirements & Feature Set

6.1 Marketing site — Shipped

- Home page with hero, value proposition and clear call-to-action; brand presentation in the DSB dark/green identity.

6.2 Case studies & articles — Shipped

- Case-study pages showcasing delivered work; an article/blog surface for insight content.
- As of 2026-08-02: 13 case-study pages (`/work/<slug>`, each with a prerendered OG card for social crawlers) and 9 insight articles. The latest portfolio expansion (five new case studies; counters derived from the data) merged 2026-07-30 via PR #11.

6.3 Lead capture — Shipped

- A contact form that feeds an inbound-lead pipeline (n8n-backed intake), turning visitors into enquiries.
- Implemented as a serverless relay (`/api/contact`) so the webhook URL stays server-side; the playbook page adds a second lead endpoint (`/api/playbook-lead`) into the same n8n intake.

6.4 Admin area — Shipped (analytics scope)

- An authenticated admin section (multiple sub-routes) to manage projects and content without code changes.
- Status note (2026-08-02): what shipped is an owner-only, password-gated admin covering analytics, reporting and login/logout. Project and article content is still managed in code (data registries cross-checked by tests) — the content-management portion of this requirement remains open.

6.5 Insights / analytics — Shipped

- An insights view rendering engagement data with Recharts.
- Live since 2026-06-01: `/admin/analytics`, a KV-backed visit tracker (pageviews, share clicks, contact intents, form submits, device/browser/country breakdowns; no IPs stored; bot traffic filtered), covered by its own smoke-test suite. The public "Insights" route is the article listing.

6.6 Reliability automation — Shipped

- A weekly automated health-check (DNS, HTTPS, SSL, headers, body) reporting to a private channel.

6.7 Implementation status (as of 2026-08-02)

Item	Status	Date
Migration off Wegic to Vercel (dsb-digital)	Shipped	2026-05-01
Security headers via <code>vercel.json</code>	Shipped	with migration
Admin analytics (<code>/admin/analytics</code> , KV-backed)	Shipped	2026-06-01
Portfolio: 19 entries / 12 live / 13 case studies	Shipped	2026-07-30 (PR #11)
Insight articles (9) with prerendered deep pages	Shipped	rolling, since 2026-05
Career playbook landing page (<code>/playbook</code> : free CV-guide download + notify-me, terms/privacy/refunds pages)	Shipped	2026-07-20 (PR #7)
Playbook paid checkout	Not live — buy CTA deployed dormant behind a <code>CHECKOUT_URL</code> launch switch (PR #10)	pending
Admin content management (projects/articles editable without code)	Not built — content lives in code registries	open
Weekly health-check to private channel	Running	weekly

7. Non-Functional Requirements

- **Performance.** Vite production build served from Vercel's edge; motion via Framer Motion kept lightweight; targets strong Core Web Vitals.
- **Security.** Full HTTP security headers via `vercel.json`; Let's Encrypt TLS; weekly automated header/TLS verification.
- **Type safety.** `tsc` strict must pass; ESLint runs clean (no warnings).
- **Cost.** Zero recurring hosting cost (replaced the \$69.99/month builder); free-tier Supabase/Upstash.
- **Brand integrity.** Content stays on Digital Product Development; the DSB green-on-black identity (Inter + Cormorant Garamond) is consistent throughout.

8. Technical Architecture

- **Frontend.** Vite 7 + React 19 + TypeScript 5.6 + Tailwind CSS 3.4 + Framer Motion; React Router v7; Recharts.
- **Backend services.** Vercel serverless functions (`api/`) with Upstash Redis (KV) for analytics storage and admin-session revocation; admin auth is password-gated with an HMAC-signed `HttpOnly` cookie (no Supabase in the live path — a Wegic-era Supabase client scaffold remains in the repo, unused). Contact and playbook lead forms relay server-side to an n8n lead-intake workflow.
- **Hosting & domain.** Vercel (project `dsb-digital`), auto-deploy on push to main; apex `dsbdigital.biz` + `www`; Let's Encrypt SSL.
- **Tooling.** `pnpm` only (`pnpm install --frozen-lockfile`, `pnpm run typecheck`, `pnpm run lint`, `pnpm run build`). Node toolchain is not on the default PATH on the build machine and must be exported.
- **Brand tokens.** Accent green `#32DC70` on near-black `#0a0a0a`; body Inter, display Cormorant Garamond; dark mode by default.

9. Success Metrics & KPIs

Metric	Target
Recurring hosting cost	\$0 (down from \$69.99/mo) — met
Uptime / health-check pass rate	100% weekly checks green
Security header grade	All headers present and correct — met
Inbound enquiries via contact form	Establish baseline, grow quarter-on-quarter
Core Web Vitals	All "good" thresholds

10. Risks, Roadmap & Appendix

10.1 Risks & mitigations

Risk	Mitigation
Silent downtime or TLS/header regression	Weekly automated health-check with channel alerting
Lead-pipeline breakage (email/auto-reply)	n8n intake monitored; SMTP credential refresh path documented
Brand drift	Content guardrail: Digital Product Development focus; consistent DSB tokens
Vendor lock-in recurrence	Owns the stack on free-tier, portable infrastructure

10.2 Roadmap & milestones

- **Now (shipped, as of 2026-08-02):** live site, 13 case studies, 9 articles, lead capture, admin analytics, weekly health-check; migrated off Wegic (2026-05-01); playbook landing page (2026-07-20); portfolio expansion to 19 entries (2026-07-30).
- **Next:** activate the playbook paid checkout (flip the dormant CHECKOUT_URL switch once the payment provider approval completes); continue the case-study and SEO article cadence.
- **Later:** A/B-tested landing variants; richer analytics; admin-managed content (currently code-managed).

10.3 Appendix

- **Glossary.** CWV = Core Web Vitals; lead intake = the contact-form-to-pipeline flow.
- **Source docs.** Repository README; `vercel.json` (security headers); the weekly health-check routine.
