

THE SOLO STACK

How I ship production software *solo.*

No team. No funding round. Just AI used like a specialist crew.

Software used to need *an army*.

Discovery sprints. Daily standups. Six weeks of "almost done."
For a solo builder in an emerging market, that timeline is a death sentence.

Agents as *specialists.*

I stopped treating AI like an assistant and started treating it like a team.

- **Claude Code** as the IDE I build in
- **Specialist agents** for code review, QA, and security
- **Skills** for anything I do more than twice
- **A bias to ship** over a growing backlog

THE LOOP

Same loop,
every time.

Small, repeatable, and reviewed at every step.

THE BUILD LOOP

Write • Review • QA • Ship

Three products. *One operator.*

AI doing the work a small team used to do, on an emerging-market budget.

YOUR MOVE

Want the same *stack?*

Follow for the build-in-public playbook, one product at a time.

DM me "MVP" and I'll send a 72-hour build plan for your idea.
