

BUILD STORY · LMIS

A pharma supply-chain OS. *In production.*

Tracking real medicine, in real facilities, right now.

Medicine that *disappears.*

Stockouts, expiries, and lost shipments cost lives in fragile health systems. Most of it stays invisible until it is too late.

Nexa-Logistix *LMIS.*

A logistics operating system for the last mile.

- **End-to-end stock visibility** from warehouse to shelf
- **Serialization** and track-and-trace
- **Multi-facility** role-aware access
- **Offline-first sync** for the last mile

WHERE IT IS

Live and tracking *real stock.*

Deployed and in daily use, not a prototype.

STATUS · IN PRODUCTION

Logistics is just *data in motion.*

Years coordinating field operations taught me the workflow. AI helped me ship the system.

YOUR MOVE

Moving stock you can't *see*?

DM me "MVP" for a 72-hour build plan.
