

5 lessons from building 3 products *solo.*

What I would tell anyone building with AI in 2026.

Three products taught me more than any *course*.

An EMR, a supply-chain OS, and a family app. Here is what stuck.

Five that *matter.*

01 **Treat agents as specialists**
Assign roles, not tasks.

02 **Ship small, ship often**
Momentum beats perfection.

03 **Offline-first is non-negotiable**
Build for 22% connectivity.

04 **Domain knowledge is the moat**
Know the problem cold.

05 **Review everything**
A second agent catches what you miss.

Tools got cheap. *Judgment didn't.*

Anyone can prompt. Few know which problem is worth solving, and how it breaks in the real world.

YOUR MOVE

Building with AI *yourself?*

Save this and follow for the full playbook.

DM me "MVP" to have it applied to your idea.
