

THE JOURNEY

From global health to AI-built *products.*

It started with a borrowed MacBook, at 34, in Rwanda.

WHERE IT BEGAN

34

The age I first
touched a *MacBook*.

During my Master's in Global Health Delivery in Rwanda. The machine changed how I thought about building.

Earned, not *downloaded.*

- **Data analyst** high volume, high velocity
- **Project coordinator** on a national digital transformation project
- **Postgraduate Diploma** in Digital Health
- **One month of AI** 10 tools, Claude included

No code. Then *agents*.

Three months building with no-code tools, then the leap to Claude and AI agents, and real products started shipping.

AI didn't replace
the years. *It unlocked them.*

Every product I ship stands on 5+ years of statistical, supply-chain, and healthcare work.

YOUR MOVE

Following the *journey?*

Follow for the build-in-public chapters ahead.

DM me "MVP" if you want yours built too.
