

MYTH-BUSTING

3 myths about building with *AI.*

From someone who actually ships with it.

What people *get wrong.*

01 "AI writes it for you"
It writes with you. You still own every decision.

02 "No skill required"
The skill moved. Judgment matters more, not less.

03 "It's just toys"
Three of mine are in production, with real users.

AI is a power tool. *Not autopilot.*

It makes a skilled operator faster. It makes an unskilled one dangerous, faster.

Garbage in, *garbage at scale.*

If you cannot tell good output from bad, AI just helps you ship the bad version sooner.

The operator is *the moat*.

The tools are the same for everyone now. The judgment is not.

YOUR MOVE

Which myth
did *you believe?*

Tell me in the comments. No judgment.

DM me "MVP" if you want it built by someone who knows the difference.
