

Solo AI build vs a *funded team.*

What an MVP actually costs in 2026.

THE OLD WAY

A small team,
six months.

- **A few engineers** salaries, benefits, the works
- **A designer and a PM** more headcount, more coordination
- **Months of runway** burned before a single user shows up

One operator, *one stack.*

- **One person** who knows the problem cold
- **AI agents** for the work a team used to split
- **Days, not quarters** to a deployed, working MVP

Same product. A *fraction* of the cost.

Not a worse product. The same working MVP, for a tiny share of the time and money.

Teams still win *at scale.*

Past product-market fit, you hire. But you should not need a team to find out if the idea works.

YOUR MOVE

Pricing out an *MVP*?

DM me "MVP" for a 72-hour build plan and a real number.
